--39. A method of imaging organs, blood vessels or tissues of a mammal comprising administering to the mammal by injection or infusion a suspension of microparticles homogeneously distributed in an aqueous liquid carrier by means of an injector system comprising a syringe containing said suspension and a power driven piston for injecting said suspension into a patient, comprising subjecting the suspension in the syringe to a rotation or rocking motion, thereby maintaining said suspension homogeneous by preventing segregation of the microparticles by gravity or buoyancy, this being without damaging said particles or disturbing their distribution and thereafter imaging the mammal.

40. The method of claim 39, in which the organ imaged is the heart, brain, kidney or liver.

41. A method of CT imaging organs, blood vessels or tissue of a mammal comprising administering to the mammal by injection or infusion a suspension of microparticles homogeneously distributed in an aqueous liquid carrier by means of an injector system comprising a syringe containing said suspension and a power driven piston for injecting said suspension into a patient, comprising subjecting the suspension in the syringe to a rotation or rocking motion, thereby maintaining said suspension homogeneous by preventing segregation of the microparticles by gravity or buoyancy,
